

## Drugs

### Read the text and translate in written form

Pharmaceutical drugs are often classified into drug classes - groups of related drugs that have similar chemical structures, the same mechanism of action, and that are used to treat the same disease. All drugs can have potential side effects.

Drugs may be administered externally or internally. Many drugs can be administered by more than one route. The drugs can be injected intravenously, intramuscularly, or subcutaneously, breathed into the lungs as an aerosol or inhaler, injected as a solution, suspension, or emulsion, or given orally, as liquid or solid substances, topically, as an ointment.

### Task 1. Answer the questions.

1. What is a pharmaceutical drug?

### Task 2. Match the sentences in the dialogue in the correct order.

<b>Pharmacist:</b> Do you have a temperature?	<b>Patient;</b> How many do I have to take?
<b>Pharmacist:</b> You are welcome.	<b>Patient:</b> No, I don't.
